3. Brief Introduction of Physics2

• Scope of Physics & What is Electromagnetism?

- Elementary Particle in Nature and its basic property
- Four Fundamental forces in Nature
- Physics Theory (Classical, Modern)

- What is Classical Mechanics for Gravity ?

- “Physics” (‘Motion’) of the **Massive** particles/objects
- Followed by **Newtonian Laws**
- Influenced by **Gravitational Force**

What is “mass”(property), “Newtonian”(Law) and “Gravitational”(Force) ?

- What is Classical Mechanics for **Electromagnetism**?

- “Physics” (‘Motion’) of the **???** particles/objects
- Followed by **???**
- Influenced by **???**

Electromagnetic Weak/Strong Strong

Strong (~Form the Nucleus glued between protons and neutrons)

Weak (Nuclear Decay process)

- Nuclear Decay : Fusion, or Fission
(Atomic Bomb/Power Plant)

Quark-Quark interaction

In Nucleus

- "Elementary Particle in Nature" : no more break-down

Three categories of particles form the Standard Model. **Matter** is composed of quarks and leptons. The **fundamental bosons** provide three forces: electromagnetism, the strong nuclear force and the weak nuclear force. **Gravity**, the fourth fundamental force, is not explained by the Standard Model.

The **Higgs boson**, discovered in 2012, provides an explanation for how the other particles get **mass**.

Currently, the Standard Model is incomplete and does not explain many important features of the known universe, such as:

- **gravity**
- **dark matter** (27 percent of the universe)
- **dark energy** (68 percent of the universe)

<Basic Properties>

✓ **Mass**

✓ **Charge**

✓ **Spin**

❖ So, What is Electromagnetism ?

→ “Physics” of the **Electrically Charged** particles/objects influenced by **Electric Forces**

- **Electric Charge** : one of the basic properties of the **elementary particle** in Nature
- **Electric Force** : one of the **Four Fundamental forces** in Nature
 - **Force between Charges**
