# ENGINEERING SUMMER SCHOOL

## Cultural, Scientific and Technological Discovery in the European Capital of Aeronautics and Space.

Toulouse is known as European Capital of Aeronautics and Space thanks to the presence of the headquarters of companies such as AIRBUS, Galileo positioning system, SPOT satellite system, ATR and the Aerospace Valley. The European headquarters of INTEL and CNES's Toulouse Space Centre (CST), the largest space centre in Europe, are also located in Toulouse. Thales Alenia Space and Astrium Satellites (Now part of Airbus Defense) also have a significant presence in Toulouse.

Founded in 1907 and located at the heart of Toulouse—the world capital of aeronautics and space and a major hub for innovation in artificial intelligence—N7 offers far more than an engineering education.

Thanks to a rich environment that brings together startups, large industrial groups, and research centers, the school's students grow within a unique ecosystem where their talents and personalities can fully flourish. N7's ambition is to train responsible engineers, capable of tackling technical and societal challenges with creativity and ethics. In line with industry expectations, the flexible study paths offered pave the way for rewarding careers, both in France and internationally.

This summer school will be an opportunity for international students to discover our beautiful Region of Occitanie, the European famous pink city («Ville Rose» in French), its wonderful cultural heritage and delicious gastronomy (wines and terroir), to meet French, European or international researchers as well as industry representatives during visits of leading aerospace industry and other French leading research centers.

## INFORMATIONS

### Arrival in France

You will arrive on July 13, 2026 at Toulouse-Blagnac airport or Toulouse Matabiau railways station where you will be welcomed.

### Housing

You will be housed in a university residence in downtown Toulouse.

### Meals

Meals are an opportunity to meet and interact with teachers and animators in a more relaxed setting while practicing French. You can enjoy your lunch at the University restaurants in INP-ENSEEIH campus.

### Tuition Fee

1500 euros including accommodation, lunch and excursions

### ECTS credits

5 ECTS credits will be awarded to each participant.

# WHY TOULOUSE INP-ENSEEIH ?

## N7: THE SCHOOL AT THE HEART OF TOULOUSE

**Europe's #1**

**Capital for aeronautics  
and space**

**18 th**

**Best engineering school  
in France**

**1700**

**Students**

### **Welcome to France» label: a guarantee of quality for international students**

Implemented by the ministry in charge of Higher Education and Research, the label distinguishes establishments committed to providing a high-quality welcome to international students. With two stars, Toulouse INP - ENSEEIH is certified for the quality of its welcome to international students.

Getting the label is based on the evaluation of demanding criteria:

- quality and accessibility of information and welcome facilities
- administrative and pedagogical support
- quality of campus life and accommodation
- quality of post-graduation follow-up
- commitment to sustainable development and social responsibility

# PROGRAM

## Discovery of French culture

### Discovery of French culture and language (12 hours courses)

The program offers 12h of French lessons judiciously. The program includes 12 hours of French language courses, carefully distributed over the duration of the program. These classes will be taught by instructors from our institutes and organized in groups. Depending on the number of participants, courses may be shared with other Summer Schools organized during the same period.

In addition to language learning, classes on French culture will be offered to facilitate students' integration into daily life in France.

To further support incoming students, "Ambassadors"—Chinese engineering students and PhD candidates from our institutes—will be mobilized to provide guidance and tutoring throughout the program, particularly during visits and cultural activities.

### Cultural activities and visits

Many activities and visits will be offered:

- Aeroscopia Tour and assembly line of Airbus 350
- Visit of the "Cit  de l'Espac " in Toulouse
- Fireworks on the Garonne River at french national day.
- Visit of the Cathedral Sainte-C cile of Albi (UNESCO World Heritage Site)
- Visit of the medieval city of Carcassonne (UNESCO World Heritage Site).

## Scientific and technological discovery

### Academic Focus – Embedded Systems, Communications and AI for Advanced Engineering Systems

This Engineering Summer School provides an intensive introduction to embedded systems, communication technologies, and artificial intelligence for advanced engineering applications. The program combines lectures and hands-on practical activities, enabling participants to explore embedded computing platforms, intelligent communication systems, wireless connectivity, and AI-based data processing methods.

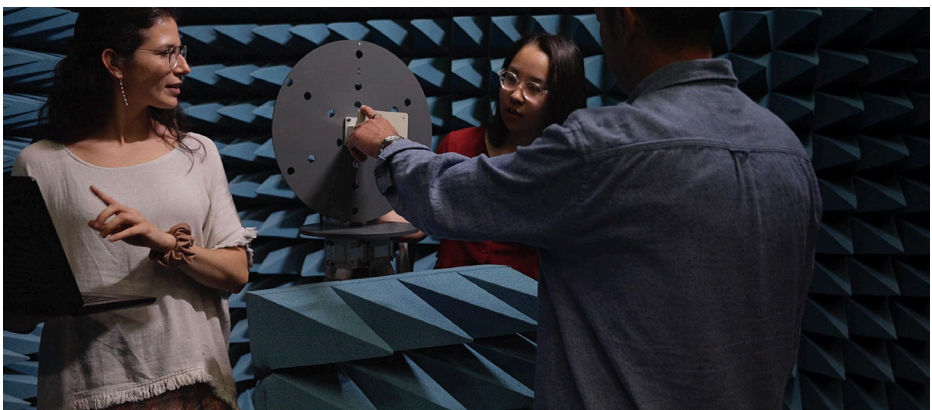

### Scientific and technological discovery

**Conferences and visits to leading industrial actors :** Conferences will be delivered by engineers and experts from major companies, with possible visits to leading industrial partners in the Toulouse ecosystem.

**Conferences and visits to leading research laboratories :** Scientific seminars and laboratory visits will be organized, including LAPLACE, IRIT, and LAAS research laboratories.

**Immersion in teaching practices of French engineering schools :** Participants will discover the pedagogical approaches used in French engineering education through selected academic sessions.

**Visits to universities and engineering schools :** Visits to higher education institutions will be organized according to participants' interests, along with meetings and exchanges with international Master's and PhD students studying in Toulouse.
